

THE BASE COLORS ARE DARK BROWN ESTABLISHED BY THE LIGHT AND RUST RED/BROWN ESTABLISHED BY THE SELF-WEATHERING STEEL BRIDGE BEAM.

COLOR STUDY

THE STUDY ILLUSTRATES A SAND/BUFF COLORED CONCRETE IN THE PARAPET AND BASE COLOR OF THE IMPRINTED STONE PATTERN AND WARM BROWN TONES ADDED TO THE STONE PATTERN.

AS THE STEEL CONTINUES TO OXIDIZE THE BROWN AND WARM GREY COLORS WILL BECOME EVEN MORE COMPATIBLE. IT IS CRITICAL THAT THE EXISTING STEEL IS PAINTED TO A MORE WEATHERED COLOR THAN THE INITIAL COLOR OF THE NEW STEEL.
